PROFESSIONAL SUMMARY

Mobile engineer with 6+ years of commercial experience building production-grade iOS and Android apps: cross-platform in Flutter, Dart, BLoC and Firebase, and natively in Kotlin with Jetpack Compose, Hilt, Coroutines, Flow and Room. Founding mobile engineer for a Sydney donation platform whose app shifted 60% of donations from web to app, with a real-time ticket booking flow that sold 13K-14K tickets against a 10K target. Owns delivery end to end: clean architecture, offline-first data, mobile payments (Stripe, Apple Pay, Google Pay), native device integrations (QR/barcode scanning, camera, push notifications, background processing), performance optimisation, multi-layer test infrastructure, CI/CD and App Store / Google Play release.

CORE COMPETENCIES

Native Android (Kotlin, Jetpack Compose)

Flutter & Dart (iOS + Android)

Clean Architecture & MVVM

Offline-First Data

Stripe, Apple Pay & Google Pay

Performance Optimisation

Test Infrastructure (Unit, UI, E2E)

App Store & Google Play Releases

WORK EXPERIENCE

Sadaqa Welfare Fund10/2023 - Present

Software Developer

Sydney, Australia

- Founding Mobile Engineer for a donation platform, building the Flutter app from early product stage with Dart, BLoC, Stripe, Apple Pay and Google Pay, shifting 60% of donations from web to app
- Developed real-time ticket booking with GoRouter and clean architecture, boosting sales by 30-40% and exceeding the 10K user target with 13K-14K tickets sold
- Integrated Firebase Messaging and Crashlytics, reducing critical issues by 20% through real-time alerts and monitoring

Babe, Get This12/2025 - Present

Native Android Engineer (self-directed)

Sydney, Australia | github.com/AabhashRai13/Babe-get-this

- Built a native Android app end to end in Kotlin and Jetpack Compose with Material 3: MVVM + Repository, Hilt for dependency injection, Coroutines + Flow for async, and Room as an offline-first single source of truth
- Set up the full test infrastructure from scratch across three layers (unit, Compose under Robolectric, end-to-end instrumented), enforced by a Kover gate that fails the build below 100% line coverage on the logic layer
- Integrated two AI APIs converting voice input into structured, auto-named lists; added Supabase auth with automatic token refresh and Retrofit + Kotlin Serialization for networking
- Shipped dev/staging/prod build variants with separate application IDs and took the app through Google Play review to a live public release

Upwork06/2023 - 10/2023

Freelance Software Developer

Sydney, Australia

- Engineered an MVP for a Flutter Web OKR (Objectives and Key Results) tool with a ChatGPT-3 API backend to demonstrate automated reporting capabilities
- Developed a cross-platform QR-based login system with Flutter, Node.js and MongoDB, enabling seamless mobile/web authentication and push notifications
- Refactored and reviewed Flutter + Firebase dating apps for performance, scalability and clean architecture

PegoTec10/2021 - 01/2023

Software Developer

Remote (Singapore)

- Spearheaded the adoption of clean architecture, enabling major component replacements (e.g. swapping local storage packages) in 2-3 days, a task that would previously have taken weeks
- Used WorkManager and Isolates to offload heavy data processing to a background thread, eliminating UI jank and keeping a consistent 60 FPS during intensive operations
- Translated 50+ unique screens and 100+ reusable components from high-fidelity Figma designs into pixel-perfect, responsive, high-performance Flutter UIs
- Managed and delivered features for 3 parallel projects, coordinating requirements and timelines with 3 different project managers in Jira for on-time delivery

TechAxis

Software Developer

Kathmandu, Nepal

- Designed and delivered comprehensive training on Flutter, covering state management, API integration and app architecture

09/2022 - 01/2023

Prixa Technology

Software Developer

Kathmandu, Nepal

- Rescued and optimised 3 legacy apps by introducing GetX and restructuring codebases, reducing crashes and improving maintainability
- Mentored 2 interns into reliable developers through best practices in Flutter and clean architecture

02/2021 - 10/2021

Unlimited Technology

Software Developer

Kathmandu, Nepal

- Increased app functionality by 25% by contributing new features to a large-scale Flutter project
- Improved system reliability by 15% by maintaining a complex legacy codebase using Provider

03/2020 - 01/2021

KEY ACHIEVEMENTS

Donation App Impact

Increased donation app usage by 60% through web-to-app transition

Sales Growth

Boosted ticket sales by 30-40% with real-time booking feature

Successful App Launch

Achieved 4.5+ app rating with 12K+ downloads within the first year

App Stability

Reduced critical issues by 20% using Firebase alerts

EDUCATION

Master of Applied Information Technology Victoria University, Sydney

SKILLS

Android / Native:

Kotlin, Jetpack Compose, Material 3, Hilt, Coroutines, Flow, Room, Retrofit, WorkManager, Gradle

Cross-Platform / iOS:

Flutter, Dart, BLoC, GetX, Provider, GoRouter, Isolates, iOS, Xcode, Fastlane

Architecture, Testing & Delivery:

Clean Architecture, MVVM, Offline-First, Unit Testing, Espresso, Robolectric, Kover, CI/CD, GitHub, Agile, Jira

Backend, Payments & Data:

Google Firebase, Crashlytics, Supabase, Node.js, MongoDB, .NET, Stripe, Apple Pay, Google Pay

AI-assisted development:

Claude Code, Codex, Cursor, GitHub Copilot (daily driver for production work, including orchestrating multiple agents running in parallel across separate workstreams)
